

FABIAN SOTO

Lady Lake, FL 32159 | fabiansoto2008@gmail.com | www.fabiansoto.com

Full Stack Developer with extensive experience in front-end and back-end technologies. Proficient in TypeScript, React, Angular, Vue, JavaScript, Tailwind, and Bootstrap for front-end development. Knowledgeable in PHP, ASP, Python, Node.js, and Laravel for back-end development.

Proactive and self-taught, always seeking to acquire new skills and knowledge. Passionate about tackling challenges and solving problems, with a strong commitment to continuous improvement.

In spare time, enjoys learning languages, which enhances communication skills and facilitates working in multicultural environments.

WORK EXPERIENCE

Freelance Web Developer | Independent Projects

Ongoing

As a freelance web developer, I have worked on various custom WordPress websites for small businesses and personal clients, focusing on responsive design, SEO optimization, and performance enhancements. I have also developed personal projects using JavaScript, incorporating front-end frameworks such as React and Vue.js to create dynamic and interactive user interfaces. Additionally, I have built and maintained eCommerce platforms, blogs, and landing pages with WooCommerce, ensuring cross-browser compatibility and mobile responsiveness. Throughout these projects, I have utilized technologies like PHP, JavaScript, and Tailwind CSS to deliver efficient, user-friendly solutions. Furthermore, I provide ongoing technical support and maintenance for clients, including security updates, performance monitoring, and content management.

Programmer Analyst | Pontificia Universidad Católica De Chile | Santiago, Chile

December 2019 to January 2024

I took the lead in implementing robust process automation modules, predominantly utilizing ASP. This involved not only developing efficient code but also closely collaborating with cross-functional teams to ensure seamless integration and functionality. By leveraging frameworks such as jQuery and Bootstrap, I enhanced the user experience and streamlined the development process. Ensuring the effectiveness and quality of automated processes was paramount, and I dedicated myself to meticulous testing and refinement to achieve optimal results.

Moreover, my role extended beyond mere implementation; I actively facilitated communication and coordination between departments, fostering a cohesive approach to project management. Through proactive engagement and regular feedback loops, I maintained alignment with project objectives and customer expectations, consistently delivering solutions that surpassed initial requirements.

Among my most notable achievements in this role was the development, alongside the IT team, of an automated system to manage administrative staff and students vaccinated against COVID-19 in record time over a single weekend during the pandemic. Additionally, I brought the School of Nursing's web pages to production with a more professional and institutional redesign and development, working with WordPress. I also developed several web pages for other departments and for our own ERP system, where we uploaded the training for each module for our users.

Web Developer | Sintegred SPA | Santiago, Chile

April 2019 to November 2019

As a web developer, I spearheaded the creation and upkeep of dynamic, visually captivating web pages utilizing WordPress and Bootstrap. Ensuring adherence to industry standards and client requirements was paramount in my role. I fostered close collaboration with the design team, striving for seamless integration of aesthetics and functionality to enhance user experience. Additionally, I took ownership of troubleshooting technical issues and maintaining the pages' security and currency.

EDUCATION

Front-End Specialization | Alura with Oracle ONE Program (Oracle Next Education)

June 2024 to Present

I have received a scholarship to pursue a front-end specialization through the Oracle ONE program offered by Alura. This approximately 9-month program provides advanced training in the latest front-end development technologies. During the course, I am working with JavaScript and modern frameworks like React. Additionally, the program includes content on integrating artificial intelligence (AI) into real-world projects, allowing me to explore and apply innovative solutions that combine web development with AI capabilities. The program's practical, project-oriented approach enables me to apply the knowledge gained in challenging, real-world scenarios. This specialization not only enhances my technical skills but also prepares me to tackle emerging demands and trends in web development by incorporating AI tools into the development and optimization of applications.

Bachelor's Degree in Computer Engineering | Universidad Rafael Bellosó Chacín | Maracaibo, Venezuela

2017 to 2023

I've attained my Computer Engineering degree, acquiring a comprehensive skill set in programming, systems design, and problem-solving. Despite encountering interruptions from relocating to different countries, my determination to complete my studies remained unwavering. I utilized these pauses as opportunities for self-learning, which further fueled my resolve. I'm now eager to leverage my expertise in professional environments, where I can contribute innovative solutions and make meaningful contributions to the field of computer engineering.
